

General Purpose Clutches

ASK

Overrunning, Indexing, Backstopping Bearing Envelope (60 Series) Design, Ramp & Roller Clutches

Sealed unit

Model ASK is a ramp & roller type clutch bearing supported by two rows of roller bearings. It is a self contained and dust protected unit, shipped grease lubricated.

Nominal outside envelope dimensions are the same as a 60 Series bearing.

Torque transmission must be accomplished by a press fit on both the inner and outer race. Because of this press fit, the standard radial clearance is C4.

The interference fit tolerances on the clutch envelope, allow for a direct mounting in a standard Series 60 bearing location.

Shaft tolerance should be h6 or j6. The outer race should be pressed into a rigid housing to K6 tolerance.

Radial bearing load capacities are given in the table.

Model ASK clutches can not accept axial loading. In cases of such loads, thrust bearings must be provided.

Typical Mounting Arrangement

The ASK clutch must be mounted with a press fit on both the outer and inner race. The shaft diameter tolerance must be held to h6 or j6. The bore of the housing for the outer race should be a K6 tolerance.
